

CYBERSECURITY

Better Technology For Better Business

SECURITY MEANS CONSTANT VIGILANCE

With all of the various threats to your company's data and factoring in the impact of exploited network or system vulnerabilities, you simply don't have the time to do what it takes to keep your business secure. IT security must continually be revisited. How much time would you say you've spent working on cybersecurity issues in the last six months? Are you staying up-to-date with cybersecurity threats? If you don't have someone constantly and actively monitoring your network, you may not detect any issues until it's too late. What if you didn't know you were hit with ransomware until after the ransom payment window closed, and you couldn't access your files?

MULTI-LAYERED THREAT PROTECTION AND PREVENTION

You don't always have the time, bandwidth or resources to stay up-to-date on the latest security processes and implement the proper defenses to keep your network protected. The easiest and most beneficial solution for you is to partner with a Managed Service Provider like us and fully leverage our services and expertise. Together, we can minimize your business risk and develop a plan that focuses on resiliency, not only prevention. The best approach to IT security is a multi-layered approach, and we can provide that for you.

SIMPLIFIED MANAGEMENT

If your IT security strategy is a patchwork of different devices from multiple vendors, it may be putting too much strain on your in-house team to manage. Our unified threat management and cybersecurity services allow for a more centralized management of threats to local and remote environments from a single console. As your Managed Service Provider, we can take care of the deployment, management and monitoring for you – thereby addressing your security needs in an efficient, and simplified, and comprehensive manner.

YOUR ULTIMATE FAILSAFE

We can be the expert you can turn to in case of a ransomware or other cyber attack. As your MSP, we'll give you the steps you need to take so as to minimize interruption to your business and profitability, and also provide you and your employees with training and education to prevent future attacks. The key to protecting your business is to take preventative measures now. When you work with EXCEL, you can rest easy knowing that your network is secure, your data is protected and that we're available 24x7x365 for any and all of your support needs.

DID YOU KNOW?

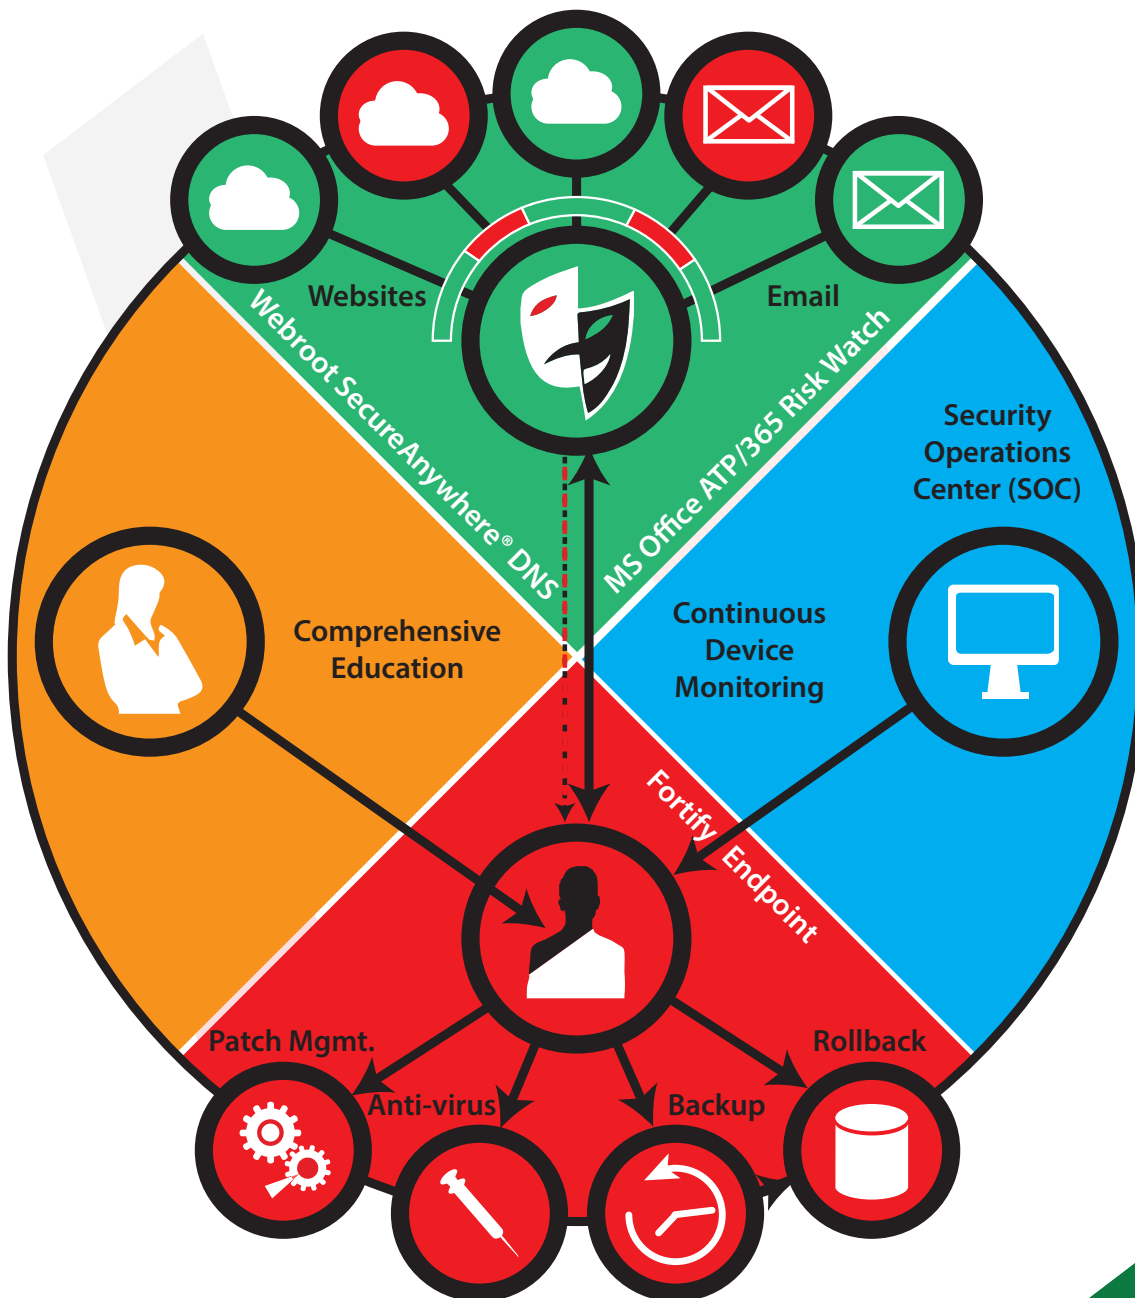

- 79% of small- to medium-sized businesses (SMBs) don't have an incident response plan.
- Signature-based anti-virus solutions detect on average less than 19% of malware threats.
- One in five victims of ransomware do not subsequently receive their data back, even after paying the ransom.
- The annual cost of global cybercrime damages are estimated to cost \$6 trillion by 2021.
- 51% of business owners are unfamiliar with unified threat management (UTM) and do not fully understand its security benefits.

THE EXCEL SOLUTION

Protect, Detect, Remediate, and Restore

HIGHLIGHTS

- EXCEL will perform an Internal/external IT Risk Assessment.
- EXCEL will launch simulated phishing attacks to test your security capabilities
- EXCEL provides comprehensive employee education.
- Sophisticated, customizable website filtering
Real-time alerts for suspicious cyber activity
- Robust endpoint protection combined with 24x7x365 monitoring by Security Operations Center
- Rapid detection, isolation, and remediation for endpoint penetration
